

The Financial Health Check

Logic Specification for Web Build

1. What This Is

An 18-question financial self-diagnostic grouped into six areas (pillars). The person picks one answer per question, the tool scores it, and a results page appears.

The only optional input is a first name. If given, the results greet them by name. If left blank, the greeting is skipped.

Results render only once all 18 questions are answered. Until then, show a progress counter.

2. Scoring

Options within every question are listed healthiest to least healthy. Points follow that order:

Option position	Points
1st (healthiest)	3
2nd	2
3rd	1
4th (least healthy)	0
5th (Q15 and Q18 only)	Not Applicable (NA)

Critical: score by option position (1st, 2nd, 3rd, 4th), not by matching the label text.

NA answers are excluded entirely from both numerator and denominator. They are not zeros. Maximum possible across the whole check = 54 (18 questions x 3), reduced by 3 for each NA. This 54 is the overall total used in Step C only. **Pillar maxima** are calculated separately and are not equal, because pillars do not all hold three questions (see Section 4).

3. Question Map

Which pillar each question feeds, and which answers trigger a red flag.

Q	Pillar	NA?	Red flag label	Urgency
1	Clarity	No	--	--
2	Clarity	No	--	--
3	Clarity	No	--	--
4	Safety net	No	Weeks from needing help	1
5	Safety net	No	--	--
6	Safety net	No	No health cover	2
7	Debt & obligations	No	Debt being avoided	4

Q	Pillar	NA?	Red flag label	Urgency
8	Debt & obligations	No	--	--
9	Debt & obligations	No	Borrowing to fund normal months	3
10	Growth	No	--	--
11	Growth	No	--	--
12	Future & protection	No	--	--
13	Future & protection	No	Retirement unaddressed	7
14	Future & protection	No	No estate instructions	6
15	Future & protection	Yes	No protection in place	5
16	Agency	No	--	--
17	Agency	No	Stepped back from your own money	8
18	Agency	Yes	--	--

A red flag fires only when the person picks option 4 (score 0) on a question that has a flag label. Urgency 1 is most pressing, and the rest follow that order.

4. Pillar Config

Weights and tie-breakers.

Pillar	Questions	Weight	Tie-break rank
Clarity	Q1-Q3	1.3	4
Safety net	Q4-Q6	1.5	6
Debt & obligations	Q7-Q9	1.4	5
Growth	Q10-Q11	0.9	1
Future & protection	Q12-Q15	1.1	3
Agency	Q16-Q18	1.0	2

Higher weight = weakness matters more. Higher tie-break number = wins the tie. So if two pillars score equally weak, Safety net (rank 6) takes priority over Growth (rank 1). Agency (rank 2) takes priority over Growth (rank 1).

Question counts are not equal across pillars. Clarity 3 (max 9), Safety net 3 (max 9), Debt & obligations 3 (max 9), Growth 2 (max 6), Future & protection 4 (max 12), Agency 3 (max 9). Total 18 questions, max 54. Do not assume three questions per pillar: Growth has two and Future & protection has four. Each pillar's max is always its remaining question count multiplied by 3, calculated per person after NAs are dropped (Step B4).

5. Decision Flowchart

This is the exact sequence of decisions, written so the developer can walk through it line by line. Each numbered step has exactly one outcome. If the website produces different results from the Excel for any test case, one of these steps was implemented incorrectly.

Step A: Score every answer

For each of the 18 questions, look at which option the person chose (1st, 2nd, 3rd, 4th, or 5th). Assign points: 1st = 3, 2nd = 2, 3rd = 1, 4th = 0, 5th = NA.

Step B: Calculate each pillar

For each of the six pillars:

- B1. Take only that pillar's questions (see Section 3 table).
- B2. Drop any question answered NA. It does not exist for this person.
- B3. Add up the points from the remaining questions. This is the pillar's score.
- B4. Multiply the number of remaining questions by 3. This is the pillar's max.
- B5. Divide score by max. This is the pillar percentage.
- B6. Label the pillar:

75% or above = Strong

40% to 74.99% = Building

Below 40% = Gap

Boundary rule: exactly 75% is Strong. Exactly 40% is Building.

Step C: Calculate the overall level

- C1. Add up all scored points across all 18 questions (excluding NAs). This is totalPts.
- C2. Add up all max points (3 per scored question, excluding NAs). This is totalMax.
- C3. Divide totalPts by totalMax. This is the overall percentage.
- C4. Assign a level:

80% or above = Level 4 (Strong Foundations)

55% to 79.99% = Level 3 (Real Effort, Visible Gaps)

28% to 54.99% = Level 2 (Working Hard, Building Slowly)

Below 28% = Level 1 (The Starting Line)

C5. CAP RULE: If ANY single pillar has a percentage below 40% (i.e. status = Gap), the overall level cannot exceed Level 3. Even if totalPct is 90%, one Gap pillar caps the result at Level 3.

Step D: Identify red flags

- D1. Look at every question that has a red flag label (8 questions, listed in Section 3).
- D2. Did the person pick option 4 (score 0) on that question? If yes, the flag has fired.
- D3. Collect all fired flags. Sort them by urgency rank (1 first, 8 last).
- D4. The top flag (lowest rank number) becomes the main red flag block on the results page. Show at most 3 flags total. If 2 or 3 fired, the extras go into an 'Also flagged' line.

Step E: Build priority gaps (up to 3)

E1. Which pillars are eligible? Any pillar with a percentage below 75% (i.e. status is Building or Gap).

E2. For each eligible pillar, calculate its priority score: (1 minus pillar percentage) multiplied by the pillar's weight.

E3. Sort eligible pillars by priority score, highest first. If two are tied, the one with the higher tie-break rank number wins.

E4. Take the top 3 (or fewer, if fewer are eligible). These are Priority 1, Priority 2, Priority 3.

E5. Pick the copy variant for each block: if that pillar's percentage is below 40%, use the Gap heading and narrative. If 40% to 74.99%, use the Building heading and narrative. (See Section 8.3 for the exact words.)

Step F: Choose one first step per priority

This is the step most likely to be built wrong. Follow it exactly.

For each priority block:

F1. List that pillar's questions.

F2. Remove any question that was answered NA.

F3. Remove any question whose flag fired in Step D. (A flagged question's step already appears in the red flag block. It must not appear twice.)

F4. From what remains, keep only questions where the person scored 0 or 1.

F5. If any remain: pick the one with the lowest score. If still tied, pick the one with the lowest question number. Use that question's first step.

F6. If none remain (all were NA, flagged, or scored 2+): use that pillar's fallback step.

Step G: All-clear path

This path fires only when all six pillars are Strong AND zero flags fired.

G1. Instead of priority blocks, show this heading: "YOU ARE DOING VERY WELL PLANNING YOUR FINANCES" followed by this paragraph: "All six areas are holding at once, which is uncommon and reflects decisions you have made deliberately. From here the work is protection and time: keeping the systems you have built running, and reviewing them periodically. Incomes, dependants and goals change, and a plan set three years ago may no longer match the life you are living."

G2. Then check: does any question have a score of 0 or 1? If yes, show 'One thing still worth doing:' plus that question's first step (lowest score wins; ties go to lowest question number).

G3. If no question scored 0 or 1: is the lowest pillar percentage less than 100%? If yes, show: "Your sharpening edge: [pillar name] — the area furthest from full marks. One deliberate look this quarter improves this."

G4. If everything is 100%, show nothing extra.

Step H: Strength block

This block is independent of the priority/all-clear path. It appears in all rendered states.

H1. Find the pillar with the highest percentage. If tied, take the first one in table order (Clarity, Safety, Debt, Growth, Future, Agency).

H2. Is that pillar's percentage 75% or above? If yes, show the strength block with that pillar's strength heading and strength copy.

H3. If the best pillar is below 75%, skip the strength block entirely.

Edge case: a flag can fire even when its pillar is Strong (e.g. Q13 = option 4 but Q12, Q14, Q15 all score 3, so Future = $9/12 = 75\%$). The flag block and the strength block can both appear.

6. Results Page Layout

Blocks appear in this exact top-to-bottom order. Some are conditional.

#	Block	Content	When
1	Headline	"[firstName], here is what your answers show." Omit the name if blank.	Always
2	Score + Level	"totalPts out of totalMax" then level name and intro paragraph.	Always
3	Red flag block	"THE THING THAT CANNOT WAIT" with the top flag's label, pillar, and first step. If 2-3 flags: one line "Also flagged: [label2] [label3]".	Only if flags fired
4	Six-pillar scoreboard	Fixed order: Clarity, Safety, Debt, Growth, Future, Agency. Each shows score/max, status word, 10-block progress bar (filled = $\text{ROUND}(\text{pct} \times 10)$).	Always
5	Priority blocks OR All-clear	Section heading varies: 1 gap = "Your priority gap", 2 or more = "Your priority gaps". Each block: "PRIORITY n" + heading + narrative + "One first step: [step]". If zero pillars are eligible AND zero flags fired, this block is replaced entirely by the Step G all-clear path and its own heading. "Very little is leaking" is used only where zero pillars are eligible but at least one flag fired.	Always (one path or the other)
6	Strength block	"ONE THING YOU ARE DOING WELL" + heading + copy.	Only if best pillar is 75%+
7	Closing CTA	Static text: "THE NEXT STEP" + pitch + link.	Always

7. Test Cases

Enter these exact answers. If the output differs from what is written here, the logic has a bug.

T1: All best answers (every question = option 1)

Score: $54/54 = 100\%$. Level 4 (Strong Foundations). No flags. All six pillars Strong (100%).

The all-clear path fires (Step G), so no priority blocks render and the "Very little is leaking" heading is not used. Heading shows: "YOU ARE DOING VERY WELL PLANNING YOUR FINANCES". Paragraph shows the Step G text exactly as written in Step G1.

No follow-on line (no question scored 0 or 1, and all pillars are 100%). Strength block: Clarity (first in table order, all tied at 100%).

T2: All worst answers (every question = option 4)

Score: $0/54 = 0\%$. Level 1 (The Starting Line). All 8 flags fire. Top flag: Q4 "Weeks from needing help". Also flagged line: "No health cover" and "Borrowing to fund normal months" (ranks 2 and 3).

Priorities: 1 = Safety net (priScore 1.5), 2 = Debt (1.4), 3 = Clarity (1.3). All use Gap variant.

Steps (critical test): Safety net's step comes from Q5 (not Q4 or Q6, because those are flagged). Debt's step comes from Q8 (not Q7 or Q9, flagged). Clarity's step comes from Q1 (all three score 0, none flagged, lowest question number wins). Strength block: omitted (no pillar reaches 75%).

T3: Middle case (Q15 = NA, Q18 = NA, all others = option 2)

All scored questions = 2 points each. Future max drops from 12 to 9. Agency max drops from 9 to 6. Total: $32/48 = 66.7\%$. Level 3.

No flags (no question answered option 4). All six pillars = $66.7\% = \text{Building}$.

Priorities: 1 = Safety net (priScore = $0.333 \times 1.5 = 0.50$), 2 = Debt ($0.333 \times 1.4 = 0.467$), 3 = Clarity ($0.333 \times 1.3 = 0.433$). All use Building variant.

Steps: no question scored 0 or 1, so each block uses its pillar's fallback step. Strength block: omitted (best pillar is 66.7% , below 75%).

8. Full Content

Every word the person reads on screen. If you want to change what the tool says, this is what you edit.

8.1 Levels

Level	Floor	Name	Intro
1	0%	The Starting Line	Every gap on this page has a fix, and none of them requires you to earn more before you start. Your answers show which ones to take first, and the order matters.
2	28%	Working Hard, Building Slowly	Your income is doing the work, but your money is not yet organised to do its part. Your answers point to the structure that is missing.
3	55%	Real Effort, Visible Gaps	You are clearly doing real things with your money. What your answers show is that some of that effort is not being held in place by structure, so the results are uneven rather than absent. See those area below.
4	80%	Strong Foundations	Your structure is working. The gaps left are refinements rather than foundations: placement, cover levels, and the documents that make everything else transferable. Those are the areas worth a deliberate look this year.

8.2 Pillar Fallback Steps

Used when no single question qualifies for a first step (see Step F6 in the flowchart).

Pillar	Fallback step
Clarity	Before this week ends, write down last month's income and where it actually went.
Safety net	This week, open a separate account that is not tied to your debit card and fund it. It doesn't matter how small. The habit matters before the amount does.
Debt & obligations	List every debt and every regular obligation in one place, with amounts. The best plans are those written out.
Growth	Set up one automatic transfer that leaves your account on payday, so you don't have to negotiate with yourself.
Future & protection	Pick the nearest dated goal and open a fund for it this month.
Agency	Pick one financial decision you have been postponing and give yourself a clear deadline to act on it.

8.3 Pillar Copy Variants

Each pillar has three sets of words depending on the person's score in that area.

Developer note: everything in the Heading and Copy columns below is reader-facing text. Copy it into the build exactly as written, including punctuation and capitalisation. The State column is a logic label only and never appears on screen.

Clarity

State	Heading	Copy
Gap (below 40%)	You are managing money you cannot fully see	You cannot direct money you have not counted. Until your income, spending and net worth are written down, every decision is a guess. Close this gap first, because every other area on this page depends on it.
Building (40-74.9%)	You see most of your money, but there is a gap	You are not passive with your money. What is missing is the full picture: the transfers you make and forget, the subscription that renews automatically. Tighten the view and the rest gets easier.
Strength (75%+)	You know your numbers	Clarity is the foundation most people skip, and you have not skipped it. What is left is making sure those numbers are pointed somewhere deliberate.

Safety net

State	Heading	Copy
Gap (below 40%)	One shock stands between you and your progress	You are building something, and a safety net is what stops one bad month from undoing it. At the moment an emergency or a paused salary would come out of your savings, your investments, or a loan, which sets back whatever that money was meant for.
Building (40-74.9%)	Your safety net is real but it has a hole in it	You have months of cover set aside in an account of its own, and you built that. What is missing is depth: topping it up to a full three to six months costs far less than borrowing during the emergency it is there for.
Strength (75%+)	Your safety net is real	You can absorb an emergency without touching your investments or borrowing to cover it, which means a bad month costs you money but not progress.

Debt & obligations

State	Heading	Copy
Gap (below 40%)	Obligations you have not planned for are planning your month for you	Debt without a payoff plan and family support without a set amount work the same way: both take their share of your income before you have decided what the rest is for. The answer is not to stop giving. It is to set the amount in advance and, for the debt, a date it ends.
Building (40-74.9%)	Not everything that leaves your hands has a plan yet	Loan repayments are happening and most of your giving is deliberate. What is left is the part that is still informal: the giving with no ceiling, the debt with no end date. Setting a limit on both is what stops the drift.
Strength (75%+)	What leaves your hands, leaves on your terms	Your debts have a plan and your obligations have a budget line. That structure is what keeps your bigger decisions from being forced ones.

Growth

State	Heading	Copy
Gap (below 40%)	Your income is doing the work, but your money has not caught up	Money sitting in a regular account will keep losing value, and nothing on your statement will show it. That is inflation doing its work. What closes this gap is structure: paying your future first by automatic transfer, and keeping that money where it earns more than prices rise.
Building (40-74.9%)	Your money has started working but it is not yet pulling its weight	You have savings and investments in motion. The question now is placement: is what you are holding working as hard as it could be, or is some of it sitting somewhere convenient rather than somewhere suitable?
Strength (75%+)	Your money is working alongside you	You save first and your money is invested with intention. What is left is checking that each holding is still the best available option for what you need it to do.

Future & protection

State	Heading	Copy
Gap (below 40%)	The future keeps arriving without a fund waiting for it	School fees, a home, retirement: these arrive on known dates, so each needs its own fund rather than one general pot. The second half of this area is protection. Without a will, written instructions and adequate cover, the people you provide for would have to work out for themselves what you own and where it is held.
Building (40-74.9%)	Your longer-term plans are partly funded	Some of your dated goals already have money set aside for them. The ones that do not, and the documents you have not written yet, will not cause you a problem until the point you need them, which is usually the point you cannot fix them.
Strength (75%+)	You are building with the long view	Your goals have funds, your future is being financed and your affairs are documented. You have covered the part most people postpone: protecting what you are building, and the people you are building it for.

Agency

State	Heading	Copy
Gap (below 40%)	You have financial access, but not yet financial agency	Money passes through your hands, but the decisions, the visibility and the confidence are still being built. Financial confidence is built one decision at a time, and it comes from understanding a plan you helped write rather than following one you were handed. Where money is shared, asking to see the full picture is partnership, not distrust.
Building (40-74.9%)	You own most of your decisions, but the claim is not finished	You are present in your money and the big decisions pass through you. What is left is the part that only exists in your head: the decision you keep postponing, the account or policy your partner has never seen. Pick one and put a date on it this month.
Strength (75%+)	You sit in the driver's seat of your own money	You decide from understanding, your name is on what you have built, and you can look at your finances without flinching. That is financial agency, and it is what the other five areas make possible.

8.4 Questions

Every question, its options with scores, the first step action, and the red flag label (where applicable).

Q1 · Clarity

Do you know what you earned last year — salary, bonuses, dividends, rental income, every source?

#	Option	Score
1	Yes — I know the exact figure	3
2	I know my salary. The rest I'd have to check	2
3	I am uncertain of my total income including my salary	1
4	I'd have to look it all up	0

First step: Before this week ends, list every source that put money in your hands last year — salary, dividends, rent, any side income — and add it all up. You cannot build a plan from a number you do not know.

Q2 · Clarity

Do you have a written spending plan you actually use?

#	Option	Score
1	Yes — every naira has a job before the month starts	3
2	I have one, but I drift from it by mid-month	2
3	I made one once. It is somewhere.	1
4	No — I spend, then see what is left	0

First step: Before the new month starts, write one page: every naira given a job across your essentials, obligations, savings and lifestyle. It does not have to be perfect. It has to exist.

Q3 · Clarity

Do you know your net worth — everything you own (pension and gratuity included), minus everything you owe?

#	Option	Score
1	Yes, and I track how it moves over time	3
2	I have a rough idea	2
3	I have never calculated it, but I could	1
4	I am not sure what would even count	0

First step: List what you own — pension included. List what you owe. The difference between the two is your net worth. Estimates are fine for now.

Q4 · Safety net | Red flag: Weeks from needing help (rank 1)

If your income stopped today, how long could you cover your essential expenses?

#	Option	Score
1	Six months or more	3

#	Option	Score
2	Three to six months	2
3	About one month	1
4	I would need help within weeks	0

First step: Open a separate account this week and move one week of essentials into it, then repeat every payday. Small amounts are fine, because the habit is what you are building first.

Q5 • Safety net

Where does your emergency money live?

#	Option	Score
1	In a separate account I do not touch — and it earns something while it waits	3
2	In a separate account... that I dip into sometimes	2
3	Mixed in with my everyday spending account	1
4	I do not have emergency money yet	0

First step: Open a dedicated account this week, separate from your spending account and not linked to your debit card. Transfer the first amount in, however small.

Q6 • Safety net | Red flag: No health cover (rank 2)

If you, your children, your spouse, your parents, and other dependents all needed hospital care this month — how well is everyone covered?

#	Option	Score
1	All of us are covered — I have health cover, and I know exactly what it includes	3
2	I am covered, but some who depend on me are not on any plan	2
3	I have some coverage, but I have never checked who it includes	1
4	We pay from our own pocket — no health cover in place	0

First step: Get quotes from at least two HMOs this week. A single hospital admission can cost more than most people hold in savings, and cover is the cheapest way to cap that.

Q7 • Debt & obligations | Red flag: Debt being avoided (rank 4)

Do you have debt — loans, credit cards, buy-now-pay-later, money owed to people?

#	Option	Score
1	I have no debt, or only debt that is part of a deliberate plan	3
2	I have some, with a clear payoff plan I am following	2
3	I have some, with no real plan	1
4	I have debt I avoid looking at directly	0

First step: Write down every debt on one page: the balance, the interest rate, and what leaves your account each month. You may find the total is smaller than the version you were carrying in your head.

Q8 • Debt & obligations

How planned is the money you give to family and community?

#	Option	Score
1	Budgeted — a set amount, decided in advance	3
2	I give regularly, but it is not a fixed plan	2
3	It is unpredictable, and it often strains my month	1
4	It quietly takes whatever it takes	0

First step: Total what family support and black tax actually cost you over the last three months. Set a fixed monthly amount plus a small buffer for genuine emergencies, and give from that rather than from whatever is in the account.

Q9 • Debt & obligations | Red flag: Borrowing to fund normal months (rank 3)

In the past year, have you borrowed or used your savings to fund a normal month? Not an emergency. Just life.

#	Option	Score
1	No	3
2	Once or twice, a while back	2
3	A few times this past year	1
4	Most months, if I am being truthful with myself	0

First step: Track the next month's expenses closely. Find the gap between income and lifestyle.

Q10 • Growth

When salary lands, what happens first?

#	Option	Score
1	A fixed amount moves out automatically — savings and investments are paid before anyone else	3
2	I move money to savings myself, most months	2
3	I save whatever is left, when something is left	1
4	Saving has not been possible lately	0

First step: Set one standing order: a fixed amount that leaves your account the day after payday, before life starts spending. Decide once. Let the system repeat it.

Q11 • Growth

Beyond savings — is any of your money invested? Treasury bills, money market funds, stocks, anything working on your behalf?

#	Option	Score
1	Yes — in more than one place, and I understand each one	3
2	Yes — I have one or two investments	2
3	I keep meaning to start	1
4	Investing has felt like something other people do	0

First step: Open one investment account this month with a SEC-registered fund manager, and fund it with an amount you can repeat. A money market fund is a reasonable starting point, as your money stays accessible while you learn how the account behaves.

Q12 · Future & protection

The big goals with a date on them — your children's education, a home, vacations, a named milestone — how are they funded?

#	Option	Score
1	Each goal has its own fund — a target amount, a deadline, a monthly contribution	3
2	I am saving toward them, but everything sits in one general pot	2
3	They are on my mind, but nothing is set aside yet	1
4	When the bill comes, I will find the money. I always do.	0

First step: Pick the nearest dated goal. Give it a number, a deadline and its own fund — then start funding monthly.

Q13 · Future & protection | Red flag: Retirement unaddressed (rank 7)

Beyond any mandatory pension — are you building toward the life you want at retirement?

#	Option	Score
1	Yes — I know my target number and I am funding it	3
2	I put extra aside, but without a clear target	2
3	Only the mandatory pension	1
4	I have not let myself think about it	0

First step: Confirm your RSA balance this week. Then name the income you want in retirement. The distance between those two numbers is the plan.

Q14 · Future & protection | Red flag: No estate instructions (rank 6)

If something happened to you tomorrow, would the people you love know what you have, and how to reach it?

#	Option	Score
1	Yes — it is documented, with a will or clear written instructions	3
2	Partially — someone knows some of it	2
3	It is all in my head	1
4	I have never thought about this	0

First step: Write one letter of instruction: what exists, where it is, who to call. Then work on your will and the named beneficiaries within 30 days.

Q15 · Future & protection | Red flag: No protection in place (rank 5)

Do you have life cover, or other income protection for the people who depend on your income?

#	Option	Score
1	In place, and reviewed within the last two years	3
2	In place, but probably not enough	2
3	I have looked into it, but not acted	1
4	Nothing yet	0
5	Not applicable — no one depends on my income at this time	NA

First step: Get life insurance quotes from three insurers this week. Cover is priced on your age and health at the point you buy it, so the same policy costs more every year you delay.

Q16 • Agency

When a major money decision lands on your table, you...

#	Option	Score
1	Decide from a written plan and/or my own understanding	3
2	Decide confidently, though not from a formal plan	2
3	Ask around, and hope the advice is good	1
4	Postpone it — deciding feels heavy	0

First step: Name the one money decision you have been postponing. Set a deadline for it and decide using your numbers, not from pressure.

Q17 • Agency | Red flag: Stepped back from your own money (rank 8)

How visible are you in your own financial life?

#	Option	Score
1	I know what is mine, I control it, and my name is on it	3
2	I am involved, but someone else drives the big decisions	2
3	I contribute, but I could not list what exists or where	1
4	I have stepped back from money matters almost entirely	0

First step: Re-enter one piece of your financial life this week: one account or asset, in your name, checked and understood by you.

Q18 • Agency

Money between you and your partner — how much of the full picture can you see?

#	Option	Score
1	We both see everything — incomes, assets, debts — and the big decisions are made together	3
2	I see most of it, but some parts are not discussed	2
3	I know my own side only	1
4	Money is not something we can discuss openly	0
5	Not applicable — I am not in a marriage or financial partnership	NA

First step: Book one calm money conversation: what comes in, what goes out, what exists. One honest sentence opens it.

8.5 Closing Copy

Static strings rendered at the bottom of every results page, in order:

THE NEXT STEP

A plan that fits your life, not a template with your name on it. This check can show you where the gaps are. Closing them takes a plan built around your income, your obligations and the season of life you are actually in. That is what Money Simplified does, module by module, using your own numbers rather than

examples. If something on this page was uncomfortable to read, that is usually the area worth starting with.

SEE THE MONEY SIMPLIFIED COURSE → moneysimplified.chonzzi.com/shop
